Genetics and Interbreeding The species on earth today descend from the original created kinds of Genesis 1. The many inter-species breedings that are possible today (e.g., zonkeys, wholphins), as well as the close similarities within biological groups (e.g., the canine group) that are distinct from one another, remind us of this fact.

Topic 3 Genetic Continuity Answers

topic 3.4 Inheritance. Genetic inheritance is a basic principle of genetics. It explains how characteristics are passed from one generation to the next. Genetic inheritance occurs due to genetic material in the form of DNA being passed from parents to their offspring. When organisms reproduce, all the information for growth, survival and reproduction for the next generation is found in the DNA passed down from the parent generation.
