### Chromatography | ScienceDirect

There are different types of chromatography and one of them is paper chromatography. The entire procedure requires the use of a specialized paper, specifically, a cellulose filter paper that serves as a stationary phase where the separation of compounds happens. In other words, paper chromatography is a method that makes use of a paper sheet or strip as an adsorbent in the stationary phase through which a particular solution is allowed to pass.

### What is Paper Chromatography - How does it work, procedure ...

Paper chromatography is an analytical method used to separate colored chemicals or substances. It is primarily used as a teaching tool, having been replaced by other chromatography methods, such as thin-layer chromatography. A paper chromatography variant, two-dimensional chromatography involves using two solvents and rotating the paper 90° in between.

### Paper chromatography - Wikipedia

Among other applications, analytical chromatography can be used to follow the fates of substrates in chemical reactions, to test for the presence of substances of interest in complex mixtures, and to profile metabolic activities.
