Positioning in Anesthesia and Surgery | Anesthesiology ...

Positioning the patient for a surgical procedure is a shared responsibility among the surgeon, the anesthesiologist, and the nurses in the operating room. The optimal position may require a compromise between the best position for surgical access and the position the patient can tolerate. The chosen position may result in physiologic changes and can result in soft tissue injury (eg, nerve damage, pressure-induced injury or ulceration, or compartment syndrome).

Patient positioning for surgery and anesthesia in adults ...

Patient positioning is a subject of prime concern to the anaesthetist and surgeon; it is also occasionally a cause of conflict between the anaesthetist attempting to maintain parameters within physiological limits while the surgeon attempts to push anatomical considerations to their limits in an attempt to achieve optimum access to the surgical target.

INTRODUCTION. Positioning the patient for a surgical procedure is a shared responsibility among the surgeon, the anesthesiologist, and the nurses in the operating room. The optimal position may require a compromise between the best position for surgical access and the position the patient can tolerate.

REFERENCES - UpToDate

Positioning during shoulder arthroscopy may affect the type of anesthesia used. In the BCP, it is possible to use general or regional anesthesia (interscalene block). However, regional anesthesia is poorly tolerated by patients in the LDP, so the preference for this position is general anesthesia. More details are presented in the following.

Patient Positioning and Anesthesia for Rotator Cuff Surgery

Surgical positioning is the practice of placing a patient in a particular physical position during surgery. The goal in selecting and adjusting a particular surgical position is to maintain the patient's safety while allowing access to the surgical site. Often a patient must be placed in an unnatural position to gain access to the surgical site. Positioning normally occurs after the administration of anesthesia. In addition to considerations related to the location of the surgical site, the sele
