Skeptics Guide To Global Warming

those skeptical about the severity of future warming. These are: Humans are responsible for increasing CO₂ The effects of CO₂ in the atmosphere were first established in 1850. Radiative physics shows us that a doubling of CO₂ would raise global temperatures by at least 1.80 Celsius. More warming than this is possible but how much is uncertain.

Know the facts - Berkeley Earth

The Scientific Guide to Global Warming Skepticism looks at both the evidence that human activity is causing global warming and the ways that climate 'skeptic' arguments can mislead by presenting only small pieces of the puzzle rather than the full picture. The Guide explains the science in brief, plain language without getting too technical. For those who wish to dig deeper into the science, more detailed treatments can be found at the following pages (often presented with varying levels ...

Shop Skeptic is the online store for the Skeptics Society and Skeptic magazine.

Shop Skeptic: A Skeptic's Guide To Global Climate Change ...

When you look through the many arguments from global warming 'skeptics', a pattern emerges. They tend to focus on small pieces of the puzzle while neglecting the bigger picture. A good example of this is the argument that human carbon dioxide (CO₂) emissions are tiny compared to natural emissions. The argument goes like this.

Scientific Guide - Global Warming and Climate Change ...

Global warming skeptics also believe the models used to predict Earth's future under global warming are unreliable. They feel that while the sun, clouds, gases, glaciers and oceans are responsible for weather, so, too, are other factors, including some we don't currently understand.
